

Dissect an Owl Pellet!

From The Raptor Center

Owl pellets are formed when owls swallow their prey whole, then cast a pellet out of their mouths 12 to 24 hours later. The pellet contains the indigestible bones and fur of the prey, **you may even find a full skeleton!**

Owl pellets make a wonderful learning tool that can be used to introduce students to comparative skeletal anatomy, concepts of natural history, and ecology and predator/prey relationships. A great in-class activity before or after your visit to The Raptor Center.

Organic & made in Minnesota!

Funds raised through the sale of owl pellets help support the care and feeding of our raptors and the important work we do in our clinic.

Owl Pellet Order Form

Order date: _____ Date needed by: _____
Contact Name: _____
Email: _____

Pricing:
\$2.50/each (Plus shipping
\$25.00/dozen & handling)
