

Dissect an Owl Pellet

from one of The Raptor Center's owls!

Strix the barred owl
TRC education raptor and
pellet contributor

Owl pellets are formed when owls swallow their prey whole, then 12-24 hours later cast a pellet out of their mouth containing the indigestible bones and fur of the prey. **You may even find a full**

Owl pellets make a wonderful learning tool that can be used to introduce students to comparative skeletal anatomy, concepts of natural history, and ecology and predator/prey relationships. A great in-class activity before or after your visit to The Raptor Center.

Funds raised through the sale of owl pellets help support the care and feeding of our raptors and the important work we do in our clinic.

Owl Pellet Order Form

\$2.50/each (plus shipping & handling)
\$25.00/dozen

Tax exempt (please include documents)
